

Potential of Green Infrastructure (GI) networks to serve single or multiple policies

Dominant type of GI links

Single policy
Multiple policies

no data

* Single policy = the purpose of GI is to serve one single policy (i.e. biodiversity, climate change, water management, etc.).
Multiple policies = the purpose of GI is to serve multiple policies simultaneously.

The concept of multifunctionality in GI planning means that multiple ecological, social and also economic functions shall be explicitly considered instead of being a product of chance.

Co-financed by the European Regional Development Fund
